SUMMARY

Full-Stack Developer with hands-on experience building **distributed, production-grade systems** using **Next.js, TypeScript, Node.js, Docker, and WebSockets**. Skilled in **microservices architecture, real-time event pipelines** (Socket.io), **ACID-compliant transaction design**, and async job processing with **BullMQ & Redis**. Proficient across the full infrastructure stack — **Prisma ORM, PostgreSQL, MongoDB, Nginx, Docker Compose** — and experienced with **CI/CD, AWS EC2, and Agile/Scrum methodologies**. Delivered 3+ client projects end-to-end, focusing on scalable, maintainable, and high-performance solutions.

SKILLS SUMMARY

- **Languages:** JavaScript (ES6+), TypeScript, C++, SQL, HTML5/CSS3
- **Frontend:** React.js, Next.js, Tailwind CSS, Framer Motion, Browser APIs
- **Backend:** Node.js, Express.js, RESTful APIs, WebSockets, Socket.io, JWT Auth, BullMQ
- **Databases:** MongoDB, PostgreSQL, Redis, Mongoose, Prisma ORM (NoSQL & SQL)
- **DevOps & Tools:** Git, GitHub, Linux, Docker, Docker Compose, CI/CD, AWS EC2, Nginx

PROJECTS

DevSpace – Developer Verification & Hiring Platform |  | *Next.js, Node.js, Express, Socket.io, Redis, MongoDB*

- Architected a full-stack developer-recruiter networking platform with Next.js, Node.js, Express, and Socket.io, supporting real-time chat, notifications, and profile-based hiring workflows across **35+ routes**.
- Designed a code-analysis engine integrating **GitHub + LeetCode APIs** with custom scoring logic to auto-generate verified developer credibility badges and trust scores, significantly enhancing recruiter confidence.
- Implemented **OAuth2 authentication**, JWT, Redis caching, and REST APIs; deployed full-stack on Render with automated resume generation feature, reducing manual effort for candidates.

Banking Transaction Management System – |  | *Node.js, Express, MongoDB, Mongoose, JWT, Nodemailer*

- Built a production-grade ledger backend with **double-entry bookkeeping** — every transaction creates both a DEBIT and CREDIT ledger entry, enforcing immutability at schema level.
- Implemented a 10-step **ACID-compliant transfer flow** using MongoDB sessions — atomic all-or-nothing commits with idempotency key validation to eliminate duplicate transaction processing on retries.
- Designed **JWT authentication** with TTL-indexed token blacklisting, bcrypt password hashing (10 salt rounds), and RBAC with Gmail OAuth2 email notifications, delivering enterprise-grade security.

AsyncFlow – Smart Background Job Manager |  | *BullMQ, Redis, PostgreSQL, Prisma, TypeScript, Docker*

- Built a production-grade **distributed background job processing platform** with decoupled microservices — separate API server, BullMQ/Redis queue, and horizontally scalable worker nodes.
- Engineered end-to-end job lifecycle tracking with **Socket.io** — live progress updates, retry on failure, and cancellation of pending jobs, ensuring real-time observability.
- Fully **Dockerized** via Docker Compose — single command spins up PostgreSQL, API server, worker, and React frontend; Prisma ORM for type-safe DB migrations, simplifying development and deployment.

ACHIEVEMENTS & ACTIVITIES

- **Hackathon:** Secured **5th Rank** at **FU Nexathon 2026** — competed among 100+ teams, built and deployed a full-stack application within 8 hours using React, Node.js, and MongoDB.
- **Freelancing:** Independently designed, developed, and deployed **3+ full-stack web applications** for paying clients — managed complete lifecycle from requirements gathering to production deployment and maintenance.
- **Leadership:** Led cross-functional teams of up to **5 members** in academic and project settings — handled task delegation, sprint planning, and delivery timelines, consistently delivering projects on schedule.

EDUCATION

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology - Computer Science and Engineering

Courses: Data Structures & Algorithms, Operating Systems, Database Management Systems, Computer Networks, Compiler Design, Object Oriented Programming

Lucknow, UP

2023 – 2027
